

## Company Profile

Vention helps some of the most innovative manufacturers automate their production floors in just a few days. Its manufacturing automation platform (MAP) combines a suite of machine design and industrial automation technologies—CAD, PLM, PDM, and factory simulation software—with hundreds of plug-and-play components, and next-day shipping across North America and Europe. Vention's online-first manufacturing automation platform lets clients design, automate, order, and deploy complex automated equipment directly from their web browsers.

## Product Overview

Vention's manufacturing automation platform enables next day industrial automation through a cloud-based engineering platform.

### **Design**

Modular parts quickly snap together. As you design, see price and weight in real time.

### **Automate**

Create and simulate your automation sequence in MachineLogic, Vention's code-free programming software. Once validated, push your program directly to your automated equipment.

### **Order**

Easily review your bill of material and place your order for next day delivery. Track your order status in real-time in 'My Team', Vention's collaboration tool.

### **Deploy**

Assemble your equipment using auto-generated assembly drawings. All parts work together, no drilling or cutting required.
